

02:13 AM

Revenue dropped 18%

SEVERITY

CRITICAL

"Can someone investigate?"

Dashboards don't investigate.

They wait for a human to form the next question.

2 HOURS LATER

Can AI solve this?

THEN...

Everything turns red.

- ✗ Hallucinated statistics
- ✗ More intelligence — more latency
- ✗ No reproducibility
- ✗ A trace of tokens, not of evidence
- ✗ Cannot prove anything

What does a real investigator do?

FOLLOW THE EVIDENCE

Investigation is not finding the most suspicious answer.

It is eliminating every wrong answer too!

INTRODUCING

Verdict

An autonomous incident investigator

Metric movement in. Evidence-backed case file out.

Current system architecture

Statistics decide. The model only writes.

Explaining away testing

Remove a suspect. Watch what happens to the parent.

TEST 01

Remove Galaxy.

Revenue remains down.

TEST 02

Remove Android.

Revenue recovers.

Statistics decide.

AI writes.

Turn the LLM off. Every number remains identical.

Every conclusion is auditable.

The answer is only the final step in the trace.

REVENUE

drops

VERDICT

investigates

DIAGNOSIS

with proof.

The 02:13 alert on slide 1 is illustrative.

This screen is a real run: case e76096fdce84.

Today's dashboards answer

"What happened?"

Tomorrow's investigators answer

"Why did it happen?"

VERDICT

Our ambition: the first autonomous investigator for operational data.
